

Technical Bulletin - Product Upgrade

RGB Video Balun (500002) Now Supports HD Resolutions

Montreal, Canada — MuxLab Inc (www.muxlab.com), a designer and manufacturer of security video and audio-video connectivity solutions for copper twisted pair, has upgraded its RGB Video Balun (500002) to support HD resolutions.

Until recently, the product only supported standard resolutions up to 480i. Starting in July, the product will begin shipping with higher bandwidth performance to support HD resolutions up to 1080i/p. The product will have the same performance characteristics as other MuxLab component video baluns.

The RGB Video Balun features three (3) BNC-F connectors for mating with professional AV equipment and comes with three (3) coax jumper cables for ease of installation.

The new revision bears the text “Rev B” on the product and packaging label for ease of identification.

Distributors with stock of the original RGB Video Balun may request a stock rotation to upgrade to the new revision.

For more information, please visit the MuxLab website (www.muxlab.com) or contact MuxLab at +1 514-905-0588, or videoease@muxlab.com.
